Questions by topic: Sampling techniques & measuring abiotic factors - Set 1 (70 marks)

Answer all questions in the spaces provided.

0 1 A student used 0.5 m x 0.5 m grid quadrats to survey ground flora in two meadows, one grazed and one ungrazed. Table 1 shows the results for the grazed meadow (10 quadrats).

Table 1

Species	Number of individuals
Ribwort plantain	48
Perennial ryegrass	120
White clover	36
Daisy	24
Creeping buttercup	12

0 1 . 1 Explain why a 0.5 m x 0.5 m quadrat was chosen rather than a 10 cm x 10 cm or 100 m x 100 m quadrat.

0 1 . 2 Calculate Simpson's Index of Biodiversity (D) for the grazed meadow using D = N(N-1) / Σn(n-1). Show your working.

[3 marks]

Answer

0 1 . 3 The ungrazed meadow had D = 1.8 with the same number of species. Explain what this shows.

0 2 A student compared the invertebrates in a stream above and below a sewage outfall using kick sampling.

0 2 . 1 Describe how kick sampling is carried out so that the samples from the two sites are comparable.

[3 marks]

.....

.....

.....

.....

.....

.....

.....

0 2 . 2 Give **three** limitations of kick sampling.

0 3 . 1 Complete Table 1 to show a suitable sampling technique for each group of organisms and one limitation of the technique.

[6 marks]

Table 1

Organisms	Technique	One limitation	
Invertebrates active on the ground surface at night			
Invertebrates living in leaf litter			
Invertebrates on tree branches

0 3 . 2 Explain why a light trap cannot be used to prove that a moth species is absent from a site.

[2 marks]

0 3 . 3 Explain how a motor-driven suction sampler can give a population density, whereas a pooter cannot.

[2 marks]

10

0 4 A student estimated the population of ground beetles in a field using the Lincoln Index. 60 beetles were caught in pitfall traps, marked with a spot of paint and released. Three days later 45 beetles were caught, of which 9 were marked.

0 4 . 1 Calculate the estimated population size.

[2 marks]

Answer ..... beetles

0 4 . 2 State **four** assumptions of the Lincoln Index method.

0 7 A student investigated the effect of pH on the germination of cress seeds.

0 7 . 1 Explain why cress is a suitable species for this investigation but the results may not apply directly to natural ecosystems.

[2 marks]

0 7 . 2 Describe how the student should decide the range of pH values to test.

[2 marks]

0 7 . 3 Give **three** variables that should be standardised and explain how long the experiment should continue.

[4 marks]
